

## Enough!

A Modest Political Ecology for an Uncertain Future

Mary Lawhon and Tyler McCreary

**There is enough for all. By rethinking our approach to politics and economics we can create a future that produces less and offers more.**

*Enough!* insists: there is enough for all. Mary Lawhon and Tyler McCreary develop a “modest approach” to justice and sustainability, drawing on political ecology and postcolonial theory, as well as their own fieldwork research. The authors chart a pathway beyond modernist and arcadian environmentalisms, emphasizing uncertainty while holding onto hope for creating better worlds. The chapters tack between conceptual contours, concrete examples, proposed inventions, and personal narrative. Theorizing from the struggles of the global south and Indigenous peoples, *Enough!* proposes delinking livelihoods from work through a redistributive basic income. A UBI enables enough without overreliance on modern states. It also enables us to subtend conflicts over jobs, reduce some types of production, and deploy resources towards building postcapitalist worlds.

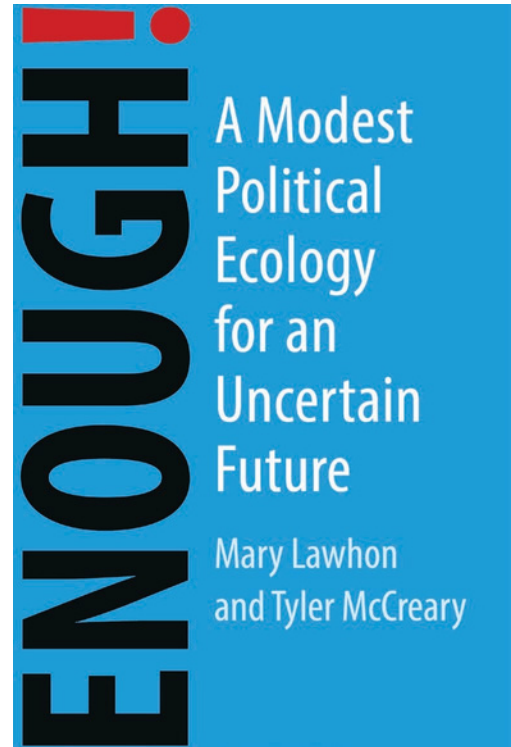

### CONTENTS

- Introduction
1. Polarising political ecologies of the future
  2. Neither more nor less: cultivating a modest political ecology
- Interlude: radical potential of a universal, unconditional basic income
3. A modest economy: diverse and distributionist
  4. A modest state
  5. Modest livelihoods
  6. Onwards

### THE AUTHORS

Mary Lawhon is Senior Lecturer in Human Geography at the University of Edinburgh.

Tyler McCreary is Assistant Professor of Geography at Florida State University.
