

Differential Forms

By **Victor Guillemin** and **Peter Haine**
(Massachusetts Institute of Technology, USA)

ISBN	9798886130829
Extent	272pp
Binding	Paperback
Year	2024
Price	Rs. 1395

ABOUT THE BOOK

“Guillemin and Haine’s goal is to construct a well-documented road map that extends undergraduate understanding of multivariable calculus into the theory of differential forms. Throughout, the authors emphasize connections between differential forms and topology while making connections to single and multivariable calculus via the change of variables formula, vector space duals, physics; classical mechanisms, div, curl, grad, Brouwer’s fixed-point theorem, divergence theorem, and Stokes’s theorem ... The exercises support, apply and justify the developing road map.”

— CHOICE

There already exist a number of excellent graduate textbooks on the theory of differential forms as well as a handful of very good undergraduate textbooks on multivariable calculus in which this subject is briefly touched upon but not elaborated on enough.

The goal of this textbook is to be readable and usable for undergraduates. It is entirely devoted to the subject of differential forms and explores a lot of its important ramifications.

In particular, our book provides a detailed and lucid account of a fundamental result in the theory of differential forms which is, as a rule, not touched upon in undergraduate texts: the isomorphism between the Čech cohomology groups of a differential manifold and its de Rham cohomology groups.

- **Authoritative** textbook on differential forms for undergraduates
- Includes numerous **Examples** and **Exercises** for further in-depth understanding on the presented concepts
- The first author, **Victor Guillemin**, is a world-renowned mathematician in the field of symplectic geometry
- His co-author, **Peter Haine**, is a talented doctoral student at MIT under Clark Barwick. His research interests center around homotopy theory, algebraic K-theory and algebraic geometry.

READERSHIP

First-year graduate and advanced undergraduate students in math programs.

CONTENTS

- Preface
- About the Authors
- Multilinear Algebra
- The Concept of a Differential Form
- Integration of Forms
- Manifolds and Forms on Manifolds
- Cohomology via Forms
- Appendix A. Bump Functions and Partitions of Unity
- Appendix B. The Implicit Function Theorem
- Appendix C. Good Covers and Convexity Theorem
- Bibliography
- Index of Notation
- Glossary of Terminology
